REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Concerning claims 17-19 there is no prior art that teach or suggest a method of nucleic acid amplification comprising increasing temperature in a vessel to cause denaturation of first nucleic acid and increasing pressure above ambient temperature effective to cause hybridization of denatured first nucleic acid and primer and extending. Concerning claim 23 there is no prior art that teach or suggest contacting first and second nucleic acids within vessel at pressure above ambient pressure that is effective to enhance hybridization of first and second nucleic acids, providing polymerase and cycling pressure between higher pressure and lower pressure where nucleic acids are denatured. The closest prior art is Mullis (4,683,195) who teach hybridization and denaturing by temperature cycling but do not teach or suggest changes in pressure to cause hybridization.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
